TE Connectivity's (TE) Crompton Instruments range of direct current shunts provides an accurate millivolt signal, exactly proportional to the system current. They can be used to drive ammeter indicators, overload protection and control devices.

These shunts enable the measurement of D.C. current in ranges from 10A to 10000A with various output options available.

Installation

For maximum heat dissipation, mount shunts in the horizontal plane. Ample ventilation should be provided. Busbars should be adequately rated, clean and level, with a thin coat of silicone grease applied to the contact surface area. Shunts are supplied with bolts, nuts and washer, these must be tightened fully.

Warning

Shunts are uninsulated and protection against accidental contact may be necessary in order to comply with Health & Safety regulations.

Customers can count on consistent, high quality products, driven by TE's proven innovation and backed by our extraordinary customer sup-
